My name is IGIRANEZA Alain Providence.

UI and UX Design Document | Mobile Application Development SWE 3409 | Individual Assignment 2

1. Identity and Concept

Item	Detail
App name	AlainPortfolio
Student	IGIRANEZA Alain Providence
Registration number	25/28075
Verification code	MOB-A2-8075
Android package	rw.ac.ines.ug2528075.alainportfolio
Version	1.0.0
Technology	React Native, Expo, TypeScript, React Navigation, AsyncStorage

Concept

AlainPortfolio replaces a paper CV with a small Android app that introduces me, shows what I can build and works fully offline. I am a Year 3 Software Engineering student at INES Ruhengeri. My goal is to gain web and app development skills that help solve social issues, so the app is calm, clear and focused on evidence.

Intended recruiter

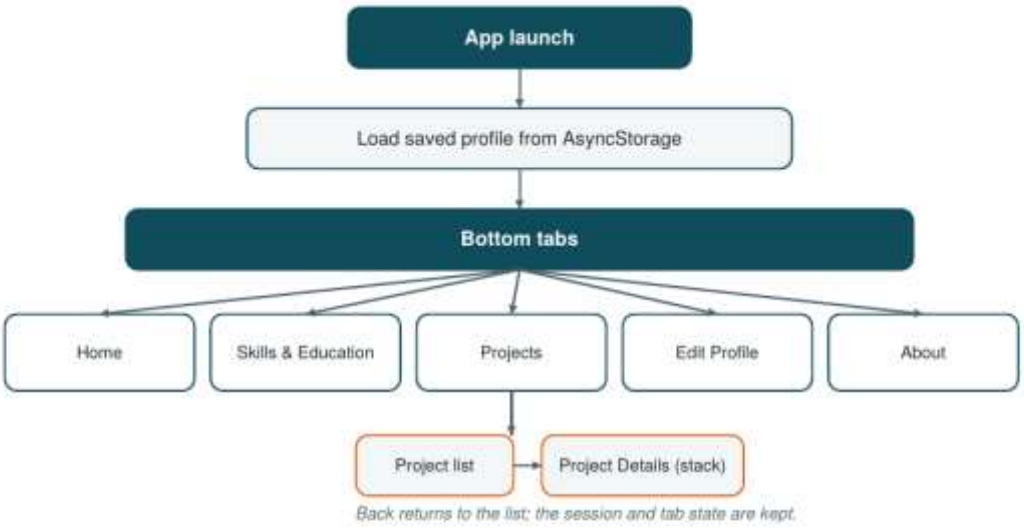

An internship or innovation-challenge recruiter who meets me in person, may have no internet connection, and wants to understand my profile in under two minutes by installing one APK and opening it without Expo Go.

Visual direction

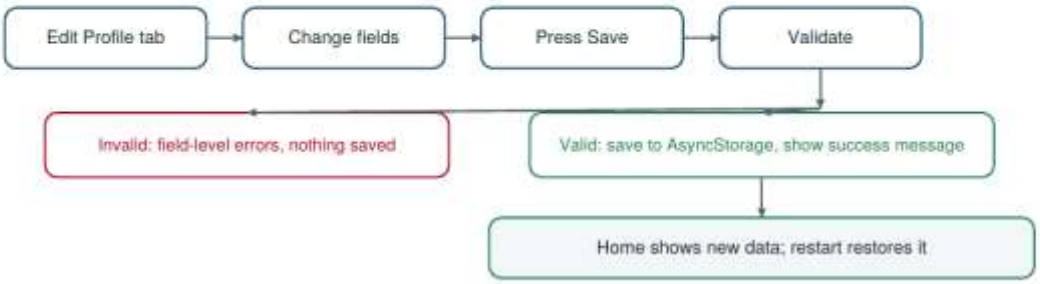

- Clean and simple: white cards on a light grey-blue background, one deep teal primary colour and one orange accent.
- One idea per screen, large readable text and large tap targets (minimum 48 px).
- Five bottom tabs for the major sections; Project Details opens as a stack screen with a Back button.
- Only required features are included, with no decorative extras.

2. User Flow and Information Architecture

Navigation structure

Profile editing and saved-state flow

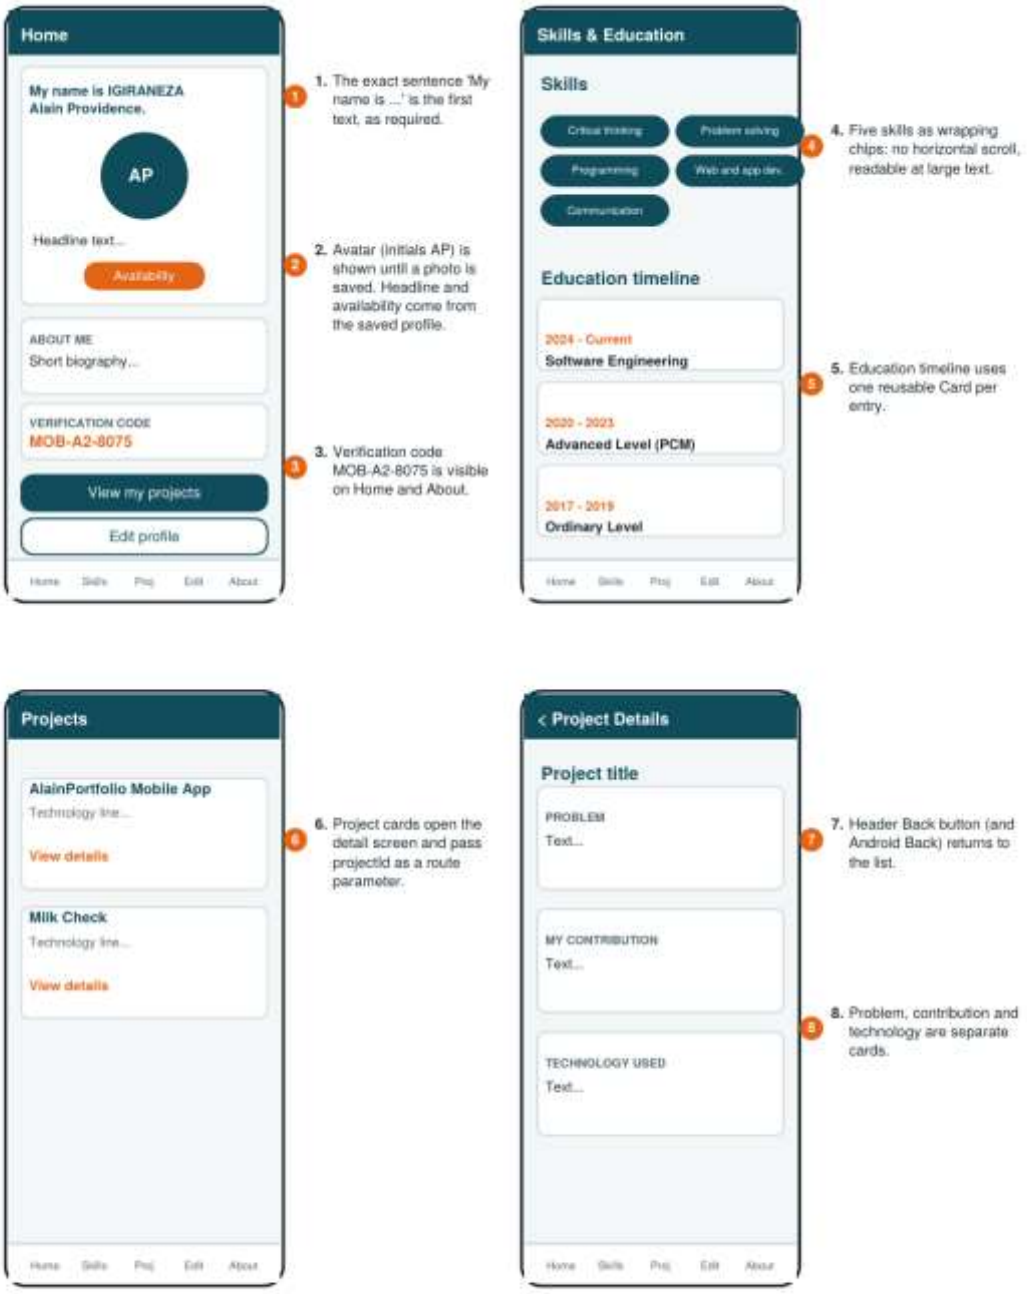

Profile photo flow

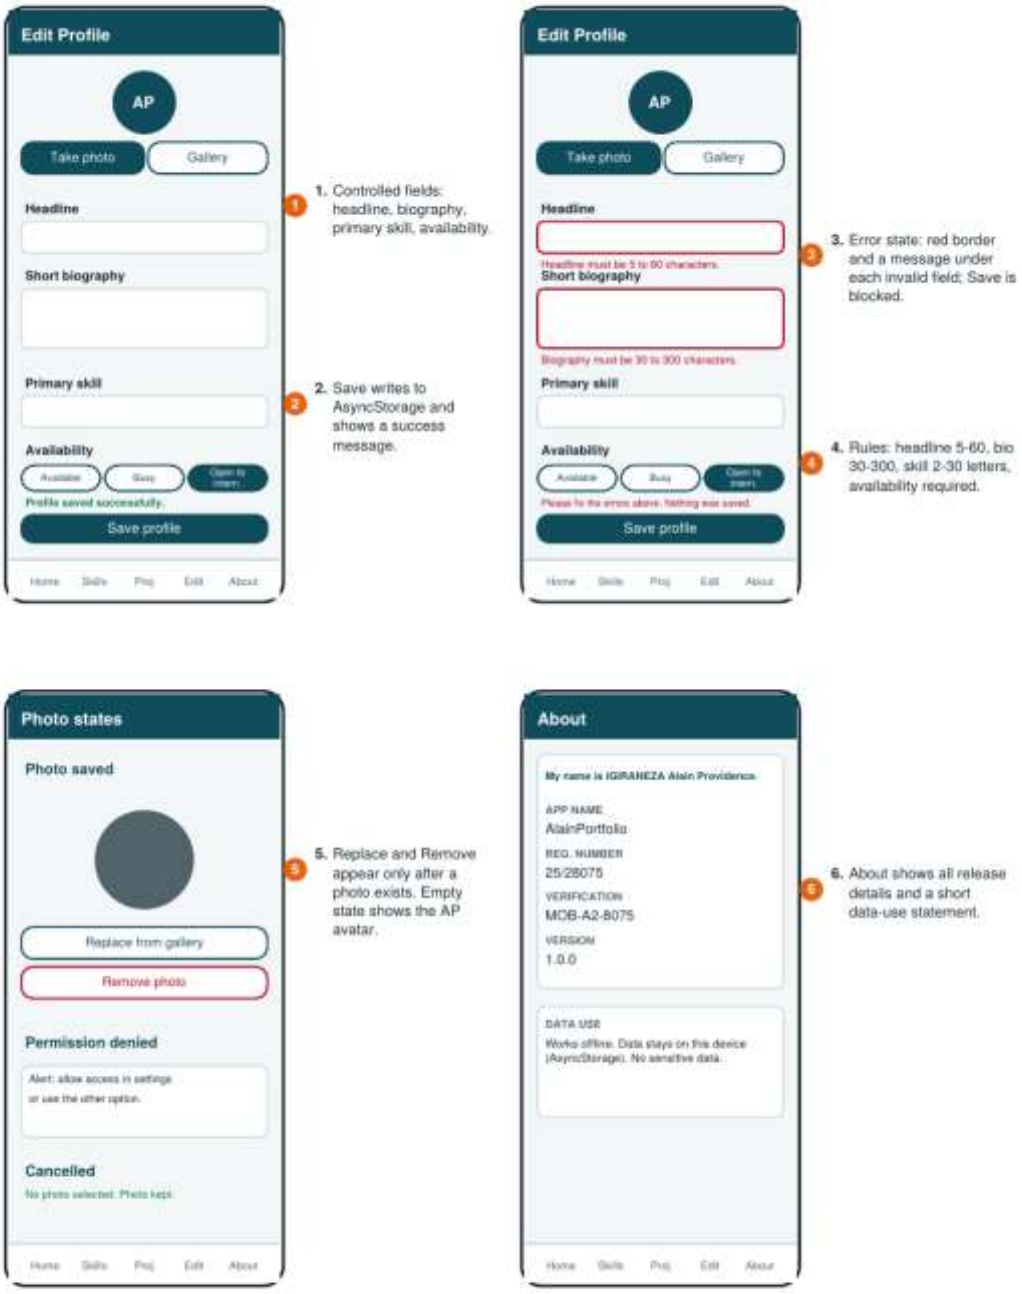

Denied permission shows an alert with a gallery/camera alternative. Cancelling keeps the current photo and shows a message. The photo is saved immediately and restored after restart.

3. Annotated Wireframes: Home, Skills, Projects, Details

4. Wireframes: Profile Editor, States and About

5. Visual and Accessibility Decisions

Colour palette and contrast

Colour	Hex	Use	Contrast on white
Primary teal	#0F4C5C	Header, buttons, titles	9.5:1
Accent orange	#C2500C	Badge, code, links	4.7:1
Text dark	#14232A	Body text	16.1:1
Muted text	#51636B	Labels	6.3:1
Error red	#B00020	Validation messages	7.3:1
Success green	#1B7F4B	Saved messages	5.0:1

Ratios are calculated from the hex values. Normal text needs 4.5:1 and large text 3:1.

Typography

- System sans-serif font (Roboto on Android) for reliability and offline use.
- Hierarchy: screen sentence 24 px bold, section titles 20 px bold, body 16 px, labels 14 px bold uppercase.
- Line height about 1.5 for body text.

Spacing and layout

- 8-point spacing scale (4, 8, 16, 24); 16 px screen padding and card padding.
- Cards have 12 px rounded corners, 1 px border and a white background on a light background.
- Flexbox with wrapping chips and options, so nothing scrolls sideways on a narrow phone.

Accessibility

- Accessible labels on buttons, inputs, the profile photo and the avatar.
- Tap targets are at least 48 px high; selected availability uses accessibilityState, not colour alone.
- Errors are shown as text under the field as well as a red border.
- Large-text behaviour: system font scaling is not disabled and every screen is a ScrollView. The result of the large-text check on a physical phone is recorded in the test log.
- Success and error messages use a polite live region so screen readers announce them.

Implementation note

The wireframes match the submitted app. Differences from a detailed design: tab icons come from Ionicons and the layout uses the system font.
